The Supervisor’s attention is drawn to the form on page 11 which must be completed and returned with the scripts.

If you have any problems or queries regarding these instructions, please contact CIE
by e-mail: International@cie.org.uk
by phone: +44 1223 553554
by fax: +44 1223 553558
stating the Centre number, the nature of the query and the syllabus number quoted above.
Safety

Supervisors are advised to remind candidates that all substances in the examination should be treated with caution. Only those tests described in the question paper should be attempted. Please also see under ‘Apparatus’ on the use of pipette fillers, safety goggles and plastic gloves.

In accordance with COSHH (Control of Substances Hazardous to Health) Regulations, operative in the UK, a hazard appraisal of the examination has been carried out.

Attention is drawn in particular, to certain materials used in the examination. The following codes are used where relevant.

- **C** corrosive substance
- **F** highly flammable substance
- **H** harmful or irritating substance
- **O** oxidising substance
- **T** toxic substance
- **N** dangerous for the environment

The attention of Supervisors is drawn to any local regulations relating to safety, first-aid and the disposal of chemicals.

‘Hazard Data Sheets’, relating to materials used in this examination, should be available from your chemical supplier.

Before the Examination

1. **Access to the question paper** is NOT permitted in advance of the examination.

2. **Preparation of materials**

   Where quantities are specified for each candidate, they are sufficient for the experiments described in the question paper to be completed.

   In preparing materials, the bulk quantity for each substance should be increased by 25% as spare material should be available to cover accidental loss. More material may be supplied if requested by candidates, without penalty.

   All solutions should be bulked and mixed thoroughly before use to ensure uniformity.

   Every effort should be made to keep the concentrations accurate to within one part in two hundred of those specified.

   Supervisors are asked to carry out any confirmatory tests given on pages 4 and 5 to ensure the materials supplied are appropriate.

   If the concentrations differ slightly from those specified, the Examiners will make the necessary allowance. They should be informed of the exact concentrations.

3. **Labelling of materials**

   Materials must be labelled as specified in these instructions. Materials with an FB code number should be so labelled without the identities being included on the label. Where appropriate the identity of an FB coded chemical is given in the question paper itself.

4. **Identity of materials**

   It should be noted that descriptions of solutions given in the question paper may not correspond exactly with the specifications in these Instructions. The candidates must assume the descriptions given in the question paper.

5. **Size of group**

   In view of the difficulty of the preparation of large quantities of solution of uniform concentration, it is recommended that the maximum number of candidates per group be 30 and that separate supplies of solutions be prepared for each group.
Apparatus

1 In addition to the fittings ordinarily contained in a chemical laboratory, the apparatus and materials specified below will be necessary.

2 Pipette fillers (or equivalent safety devices), safety goggles and disposable plastic gloves should be used where necessary.

3 For each candidate

- 2 × 50 cm³ burettes
- 2 × burette clamps
- 2 × stands
- 2 × funnels for filling burettes
- 1 × 250 cm³ graduated (volumetric) flask, labelled FB 5, with stopper
- 2 × 250 cm³ conical flasks
- 1 × 10 cm³ measuring cylinder or tube marked to measure approximately 10 cm³
- 1 × 25 cm³ pipette  
  A strip of tape should be applied below the graduation mark on the pipette with the top of the tape indicating the graduation line. This instruction may be ignored if the pipette has white graduations.
- 1 × pipette filler
- 1 × white tile
- 1 × wash-bottle containing distilled water
- 1 × 100 cm³ (or 1 × 50 cm³) measuring cylinder
- 1 × spatula
- access to a balance capable of weighing 300 g to 0.1 g or better
- 1 × heat-proof mat
- 1 × Bunsen burner
- 1 × test-tube holder
- 1 × test-tube rack
- 10 × test-tubes
- 2 × stoppers for test-tubes
- 3 × boiling-tubes
- paper towels
Chemicals Required

1. It is **especially important** that great care is taken that the confidential information given below does **not** reach the candidates either directly or indirectly.

2. **Particular requirements**

<table>
<thead>
<tr>
<th>hazard</th>
<th>label</th>
<th>per candidate</th>
<th>identity</th>
<th>notes</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>FB 1</td>
<td>150 cm³</td>
<td>0.145 mol dm⁻³ sodium thiosulphate</td>
<td>Dissolve 36.0 g of Na₂S₂O₃·5H₂O in each dm³ of distilled water. The distilled water used to make up this solution should be boiled to eliminate dissolved air and covered while cooling to prevent any carbon dioxide dissolving. Acidity in the water can lead to decomposition of the thiosulphate.</td>
</tr>
<tr>
<td></td>
<td>FB 2</td>
<td>85 cm³</td>
<td>approximately 0.18 mol dm⁻³ potassium manganate(VII)</td>
<td>Dissolve 28.44 g of KMnO₄ in each dm³ of distilled water.</td>
</tr>
<tr>
<td></td>
<td>FB 3</td>
<td>100 cm³</td>
<td>1 mol dm⁻³ H₂SO₄</td>
<td>Cautiously pour 55 cm³ of concentrated (98%) sulphuric acid [C] into 500 cm³ of distilled water with continuous stirring. Make the solution up to 1 dm³ with distilled water. <strong>Care:</strong> Concentrated H₂SO₄ is very corrosive.</td>
</tr>
<tr>
<td></td>
<td>FB 4</td>
<td>60 cm³</td>
<td>10% w/v potassium iodide solution</td>
<td>Dissolve 100 g of KI [H] in each dm³ of distilled water.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>starch indicator</td>
<td>Make a paste from 20 g of soluble starch and 50 cm³ of distilled water taken from 1 dm³ of water. Boil the remaining water and pour the paste into the boiling water. Stir well and allow to cool.</td>
</tr>
<tr>
<td></td>
<td>FB 6</td>
<td>7 g</td>
<td>anhydrous sodium carbonate</td>
<td>Provide 7.0 ± 0.2 g of anhydrous sodium carbonate, Na₂CO₃, [H] in a stoppered tube labelled FB 6. <strong>Dry the anhydrous sodium carbonate by heating in an oven at 100 °C for several hours, then cooling in a desiccator.</strong></td>
</tr>
<tr>
<td></td>
<td>FB 7</td>
<td>5 g</td>
<td>anhydrous sodium carbonate</td>
<td>Provide 5.0 ± 0.2 g of anhydrous sodium carbonate, Na₂CO₃, [H] in a stoppered tube labelled FB 7. <strong>Dry the anhydrous sodium carbonate as above.</strong></td>
</tr>
<tr>
<td></td>
<td>FB 8</td>
<td>200 cm³</td>
<td>2.0 mol dm⁻³ hydrochloric acid</td>
<td>Dilute 172 cm³ of concentrated (35% w/w; approximately 11 mol dm⁻³) acid [C] to 1 dm³.</td>
</tr>
</tbody>
</table>

**Check Titre.** Pipette (or use a measuring cylinder) 5.0 cm³ of FB 2 into a conical flask containing 10 cm³ each of FB 3 and FB 4. Titrate with FB 1, adding 1 cm³ of starch indicator just before the solution goes colourless. Continue the titration drop by drop until the solution goes colourless. **Adjust the concentration of FB 1, if necessary, to give a titre of 31.0 ± 0.5 cm³.**

</table>

red and blue litmus paper, plain filter paper strips for use with dichromate(VI), wooden splints, the apparatus normally used in the Centre for use with limewater in testing for carbon dioxide
Responsibilities of the Supervisor during the Examination

1. The Supervisor, or other competent chemist must carry out the experiments in Question 1 and Question 2 and complete tables of readings on a spare copy of the question paper which should be labelled ‘Supervisor's Results'.

   This should be done for:
   each session held and each laboratory used in that session, and each set of solutions supplied.

   N.B. The question paper cover requests the candidate to fill in details of the examination session and the laboratory used for the examination.

   It is essential that each packet of scripts contains a copy of the applicable Supervisor's Results as the candidates’ work cannot be assessed accurately without such information.

2. The Supervisor must complete the Report Form on page 11 to show which candidates attended each session. If all candidates took the examination in one session, please indicate this on the Report Form. A copy of the Report Form must accompany each copy of the Supervisor's Results in order for the candidates’ work to be assessed accurately.

   The Supervisor must give details on page 12 of any particular difficulties experienced by a candidate, especially if the Examiner would be unable to discover this from the written answers.

After the Examination

Each envelope returned to Cambridge must contain the following items.

1. The scripts of those candidates specified on the bar code label provided.

3. A copy of the Report Form, including details of any difficulties experienced by candidates (see pages 11 and 12).

4. The Attendance Register.

5. A Seating Plan for each session/laboratory.

Failure to provide appropriate documentation in each envelope may cause candidates to be penalised.

COLOUR BLINDNESS

With regard to colour-blindness – a minor handicap, relatively common in males – it is permissible to advise candidates who request assistance on colours of, for example, precipitates and solutions (especially titration end-points). Please include with the scripts a note of the index numbers of such candidates.

Experience suggests that candidates who are red/green colour-blind – the most common form – do not generally have significant difficulty. Reporting such cases with the scripts removes the need for a ‘Special Consideration’ application for this handicap.
REPORT FORM

This form must be completed and sent to the Examiner in the envelope with the scripts.

Centre Number ....................................................  Name of Centre .................................................................

1 Supervisor’s Results

Please submit details of the readings obtained in Question 1 and Question 2 on a spare copy of the question paper clearly marked ‘Supervisor’s Results’ and showing the Centre number and appropriate session/laboratory number.

2 The index numbers of candidates attending each session were:

<table>
<thead>
<tr>
<th>First Session</th>
<th>Second Session</th>
</tr>
</thead>
</table>

3 The Supervisor is required to give details overleaf of any difficulties experienced by particular candidates, giving names and index numbers. These should include reference to:

(a) any general difficulties encountered in making preparation;
(b) difficulties due to faulty apparatus or materials;
(c) accidents with apparatus or materials;
(d) assistance with respect to colour-blindness.

Other cases of hardship, e.g. illness, temporary disability, should be reported direct to CIE on the normal ‘Application for Special Consideration’ form.

4 A plan of work benches, giving details by index numbers of the places occupied by the candidates for each experiment for each session, must be enclosed with the scripts.
Report on any difficulties experienced by candidates.
