This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

|          | MMO Collection    | II In the correct spaces, records Initial and final burette readings for Rough titre and; Initial and final burette readings and, volume of FB 2 added recorded for each accurate titre. *Headings should match readings.*  
*Do not award this mark if:*  
50(.00) is used as an initial burette reading;  
More than one final burette reading is 50(.00);  
Any burette reading is greater than 50(.00)                                                                                                                                                                                                                                                                                                                                                                                                     | 1    |
|          | MMO Decisions     | III Has two uncorrected, accurate titres within 0.1 cm³.  
*Do not award this mark if having performed two titres within 0.1 cm³ a further titration is performed which is more than 0.10 cm³ from the closer of the initial two titres, unless a fourth titration, within 0.1 cm³ of the third titration or of the first two titres has also been carried out.*  
                                                                                                                                                                                                                                                                                                                                                                                  | 1    |
|          | PDO Recording     | IV All accurate burette readings (initial and final) recorded to nearest 0.05 cm³.  
*Assessed on burette readings only.*                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 1    |
|          | MMO Quality       | V, VI and VII Round any burette readings to the nearest 0.05 cm³  
Check and correct subtractions in the titre table.  
*Select the “best” titre using the hierarchy:*  
two identical; titres within 0.05 cm³,  
titres within 0.10 cm³ etc.  

Award V, VI and VII for a difference to Supervisor within 0.20 cm³  

Award V and VI only for a difference of 0.20+ cm³ – 0.40 cm³  

Award V only for a difference of 0.40+ cm³ - 0.80 cm³  
*If the selected “best” titres are > 0.50 cm³ apart, cancel one of the Q marks awarded.*                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 3    |
**ACE Interpretation**

Calculates the mean, correct to 2 decimal places (third decimal place maybe rounded to the nearest 0.05 cm³) from any accurate titres within 0.20 cm³. A mean of exactly .x25 or .x75 is allowed but the candidate may round up or down to the nearest 0.05 cm³.

If **ALL** burette readings are given to 1 decimal place then the mean can be given to 1 decimal place if numerically correct without rounding.

- Mean of 24.3 and 24.4 = 24.35 (✓)
- Mean of 24.3 and 24.4 = 24.4 (x)
- Mean of 24.3 and 24.5 = 24.4 (✓)

**Titres to be used in calculating the mean must be clearly shown – in an expression or ticked in the titration table.**

** PDO Display**

| (c) | No additional factor/expression is allowed in any step
If an answer, with no working, is given in any section allow if correct. |
<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>I</td>
<td>Uses (\frac{15.0}{248.2}) only in step (i) If no working shown accept only the following evaluated answers: (0.060, 0.0604 or 0.06044)</td>
</tr>
<tr>
<td>II</td>
<td>Uses answer (i) (\times) cand average titre (\frac{1}{1000}) in step (ii) and answer (iv) (\times) (\frac{1000}{25}) in step (v)</td>
</tr>
<tr>
<td>III</td>
<td>Uses answer (ii) (\times) (\frac{1}{2}) in step (iii), and answer (iii) (\times) 2 in step (iv)</td>
</tr>
</tbody>
</table>
| IV  | Appropriate working shown in a minimum of three sections. To include equations as steps for the working mark:

In (iii) must see \(x2\) or \(x0.5\).
In (iv) must see **multiplication or division** by 6, 1.2 or 2.

1:6 for \(IO_3^-/6H^+\),
1:1.2 for \(5I^-/6H^+\),
1:2 for \(6H^+/3I_2\) |
| V   | 3 to 5 significant figures in final answers to all sections attempted – minimum of three final answers required to qualify for the award of this mark. |

</tbody>
</table>

[Total: 15]
| (a) PDO Layout | I Records at least four different balance readings and at least one mass of solid/gas. Accept 0.0(0X) g as the mass of the empty tube or a statement that the tube is tared. | 1 |
| PDO Recording | II Gives all appropriate headings and units when recording results. Do not accept mass of empty tube as 0.0(00)g here unless tube is described as tared. (minimum of three pieces of information) | 1 |
| MMO Decisions | III All recorded balance readings consistent to at least 1 decimal place. (minimum of three balance readings) | 1 |
| MMO Quality | IV Evidence of reheating to “constant” mass. For balances reading to 1 d.p. two masses must be identical. For 2 or 3 d.p. balances, two masses must be within 0.05 g | 1 |
| | V and VI Check and correct all subtractions in the results table. Calculate \( \frac{\text{mass heated}}{\text{mass of residue}} \) to 3 significant figures. Compare to Supervisor standard or standard value of 1.45. Award V and VI for a difference up to 0.15. Award V only for a difference of 0.15+ to 0.30. Where a candidate repeats the experiment use cumulative masses of FA 3 and residue. Where masses of FA 3 and residue cannot be checked, accept candidate values to calculate the ratio. | 2 |
| (b) ACE | Evaluates \( \frac{\text{cand mass loss from (a)}}{\text{cand mass of FA 3}} \) correct to 2–4 significant figures. Where mass loss or mass of FA 3 is not given in (a), check, from balance readings, the values. A candidate who incorrectly describes the mass of the residue as the mass loss in tabulated results in (a) may “correct” the error and use the correct mass loss here. | 1 |
| (c) | ACE Conclusions | Uses $M_r$ (values) of $\text{CO}_2$ or $\text{H}_2\text{O}$ to justify how the ratio of $\text{CuCO}_3$ to $\text{Cu(OH)}_2$ affects the mass loss. 
If % loss is too high – more $\text{CuCO}_3$
If % loss is too low – more $\text{Cu(OH)}_2$ | 1 |
| (d) | ACE Improvements | Draws apparatus showing the collection of carbon dioxide in a syringe or in a burette or measuring cylinder inverted over water. 
*Allow use of an inverted tube if graduations are shown or it is suitably labelled.
All apparatus should be recognisable from the drawing or appropriately labelled.
Shows, in the diagram, an effective method of removing water vapour. 
*Named reagent; e.g. (concentrated $\text{H}_2\text{SO}_4$, $\text{CaCl}_2$, silica gel, CaO), anhydrous $\text{CuSO}_4$.
*or 
*stated purpose of an un-named reagent given.
*Allow also a suitable reflux arrangement, returning water to the heated tube.
*or 
*a statement that water vapour condenses in a water bath. Do not accept a diagram showing the gas bubbling through water without some written indication that the water is a condenser. | 1 |

[Total: 10]
Fa 4 is Al\(_2\)(SO\(_4\))\(_3\)\(_{(aq)}\); Fa 5 is ZnSO\(_4\)\(_{(aq)}\); Fa 6 is Pb(NO\(_3\))\(_2\)\(_{(aq)}\); Fa 7 is MgSO\(_4\)\(_{(aq)}\)
**ACE Conclusions**

(b) Do not accept any ion other than Al\(^{3+}\), Zn\(^{2+}\), Pb\(^{2+}\) or Mg\(^{2+}\) in any section.

Marks I to III
- Ions must be correct, including charge, if a symbol has been given. – no ecf in this section.

Award I only if one ion only is identified from correct observations.

Award I and II if two ions only are identified from correct observations.

Award I, II and III if all four cations are identified from correct observations.

*The 4\(^{th}\) cation may be identified by elimination from incomplete supporting evidence.*

Award mark IV if the supporting evidence fits the ion identified and the practical performed for at least three of the four ions.

Allow ecf on ion order on mark IV.

---

**MMO Decisions**

(c) Selects sodium or potassium chromate(VI), sulfuric acid or hydrochloric acid soln containing one of the following named ions or formula given followed by (aq):
- CrO\(_4^{2-}\), SO\(_4^{2-}\), Cl\(^-\), Br\(^-\) but not I\(^-\),
- soln containing CrO\(_4^{2-}\) ions, H\(_2\)SO\(_4\), HCl,
FA 8 is CuSO₄(aq)
