This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates’ scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.
Mark Scheme Notes

Marks are of the following three types:

M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.

A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).

B Mark for a correct result or statement independent of method marks.

- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.

- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.

- Note: B2 or A2 means that the candidate can earn 2 or 0.
  B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.

- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking g equal to 9.8 or 9.81 instead of 10.
The following abbreviations may be used in a mark scheme or used on the scripts:

AEF  Any Equivalent Form (of answer is equally acceptable)
AG   Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD  Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO  Correct Answer Only (emphasising that no “follow through” from a previous error is allowed)
CWO  Correct Working Only - often written by a ‘fortuitous’ answer
ISW  Ignore Subsequent Working
MR   Misread
PA   Premature Approximation (resulting in basically correct work that is insufficiently accurate)
SOS  See Other Solution (the candidate makes a better attempt at the same question)
SR   Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

**Penalties**

**MR -1** A penalty of MR -1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become “follow through √” marks. MR is not applied when the candidate misreads his own figures - this is regarded as an error in accuracy. An MR-2 penalty may be applied in particular cases if agreed at the coordination meeting.

**PA -1** This is deducted from A or B marks in the case of premature approximation. The PA -1 penalty is usually discussed at the meeting.
1 EITHER

State or imply non-modular inequality \((x - 3)^2 > (x + 2)^2\), or corresponding equation

M1

Expand and solve a linear inequality, or equivalent

M1

Obtain critical value \(\frac{1}{2}\)

A1

State correct answer \(x < \frac{1}{2}\) (allow \(x \leq \frac{1}{2}\))

A1

OR

State a correct linear equation for the critical value, e.g. \(3 - x = x + 2\), or corresponding correct inequality, e.g. \(-(x - 3) > (x + 2)\)

M1

Solve the linear equation, or inequality

M1

Obtain critical value \(\frac{1}{2}\)

A1

State correct answer \(x < \frac{1}{2}\)

A1

OR

Make recognisable sketches of both \(y = |x - 3|\) and \(y = |x + 2|\) on a single diagram

B1

Obtain a critical value from the intersection of the graphs

M1

Obtain critical value \(\frac{1}{2}\)

A1

State final answer \(x < \frac{1}{2}\)

2 (i)

State or imply \(y \ln 3 = (x + 2) \ln 4\)

B1

State that this is of the form \(ay = bx + c\) and thus a straight line, or equivalent

B1

State gradient is \(\frac{\ln 4}{\ln 3}\), or equivalent (allow 1.26)

B1 [3]

(ii)

Substitute \(y = 2x\) and obtain a linear equation in \(x\)

M1*

Solve for \(x\)

M1 (dep*)

Obtain answer 3.42

A1 [3]

3 (i)

State \(\frac{dx}{dt} = 3 + \frac{1}{t - 1}\) or \(\frac{dy}{dt} = 2t\)

B1

Use \(\frac{dy}{dx} = \frac{dy}{dt} \times \frac{dt}{dx}\)

M1

Obtain \(\frac{dy}{dx}\) in any correct form, e.g. \(\frac{2(t - 1)}{3t - 2}\)

A1 [3]

(ii)

Equate derivative to 1 and solve for \(t\)

M1

Obtain roots 2 and \(\frac{1}{2}\)

A1

State or imply that only \(t = 2\) is admissible c.w.o.

A1

Obtain coordinates (6, 5)

4 (i) Substitute \( x = 2 \), equate to zero, and state a correct equation, e.g.
\[
16 - 12 + 2a + b = 0
\]
B1
Substitute \( x = -2 \) and equate to \(-20\)
M1
Obtain a correct equation, e.g. \(-16 - 12 - 2a + b = -20\)
A1
Solve for \( a \) or for \( b \)
M1
Obtain \( a = -3 \) and \( b = 2 \)
A1

(ii) Attempt division by \( x^2 - 4 \) reaching a partial quotient of \( 2x - 3 \), or a similar stage by inspection
B1
Obtain remainder \( 5x - 10 \)
B1

5 (i) Make recognisable sketch of a relevant graph, e.g. \( y = \sec x \)
B1
Sketch an appropriate second graph, e.g. \( y = 3 - x \), correctly and justify the given statement
B1

(ii) Consider sign of \( \sec x - (3 - x) \) at \( x = 1 \) and \( x = 1.2 \), or equivalent
M1
Complete the argument correctly with appropriate calculations
A1

(iii) Show that the given equation is equivalent to \( \sec x = 3 - x \), or vice versa
B1

(iv) Use the iterative formula correctly at least once
M1
Obtain final answer 1.04
A1
Show sufficient iterations to justify its accuracy to 2 d.p., or show there is a sign change in the interval \((1.035, 1.045)\)
B1

6 (i) State correct expression \( \frac{1}{2} + \frac{1}{2} \cos 2x \), or equivalent
B1

(ii) Integrate an expression of the form \( a + b \cos 2x \), where \( ab \neq 0 \), correctly
M1
State correct integral \( \frac{1}{2} x + \frac{1}{4} \sin 2x \), or equivalent
A1
Use correct limits correctly
M1
Obtain given answer correctly
A1

(iii) Use identity \( \sin^2 x = 1 - \cos^2 x \) and attempt indefinite integration
M1
Obtain integral \( x - \left( \frac{1}{2} x - \frac{1}{4} \sin 2x \right) \), or equivalent
A1
Use limits and obtain answer \( \frac{1}{6} \pi - \frac{\sqrt{3}}{8} \)
A1

[Solutions that use the result of part (ii), score M1A1 for integrating 1 and A1 for the final answer.]
7 (i) State coordinates \((0, 1)\) for \(A\) \hspace{1cm} \text{B1} \hspace{1cm} [1]\\n
(ii) Differentiate using the product rule \hspace{1cm} \text{M1*}\\nObtain derivative in any correct form \hspace{1cm} \text{A1}\\nEquate derivative to zero and solve for \(x\) \hspace{1cm} \text{M1*}\\nObtain \(x = \frac{1}{4}\pi\) or 0.785 (allow 45°) \hspace{1cm} \text{A1} \hspace{1cm} [4]\\n
(ii) Show or imply correct ordinates 1, 1.4619…, 1.4248…, 0 \hspace{1cm} \text{B1}\\nUse correct formula or equivalent with \(h = \frac{1}{6}\pi\) and four ordinates \hspace{1cm} \text{M1}\\nObtain correct answer 1.77 with no errors seen \hspace{1cm} \text{A1} \hspace{1cm} [3]\\n
(iv) Justify statement that the trapezium rule gives and underestimate \hspace{1cm} \text{B1} \hspace{1cm} [1]
