This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.
Mark Scheme Notes

Marks are of the following three types:

M  Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.

A  Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).

B  Mark for a correct result or statement independent of method marks.

- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.

- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.

- Note: B2 or A2 means that the candidate can earn 2 or 0.
  B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.

- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking \( g \) equal to 9.8 or 9.81 instead of 10.
The following abbreviations may be used in a mark scheme or used on the scripts:

AEF  Any Equivalent Form (of answer is equally acceptable)
AG   Answer Given on the question paper (so extra checking is needed to ensure that the
detailed working leading to the result is valid)
BOD  Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO  Correct Answer Only (emphasising that no "follow through" from a previous error is
allowed)
CWO  Correct Working Only - often written by a 'fortuitous' answer
ISW  Ignore Subsequent Working
MR   Misread
PA   Premature Approximation (resulting in basically correct work that is insufficiently
accurate)
SOS  See Other Solution (the candidate makes a better attempt at the same question)
SR   Special Ruling (detailing the mark to be given for a specific wrong solution, or a case
where some standard marking practice is to be varied in the light of a particular
circumstance)

Penalties

MR -1  A penalty of MR -1 is deducted from A or B marks when the data of a question or part
question are genuinely misread and the object and difficulty of the question remain
unaltered. In this case all A and B marks then become "follow through √" marks. MR is
not applied when the candidate misreads his own figures - this is regarded as an error
in accuracy. An MR-2 penalty may be applied in particular cases if agreed at the
coordination meeting.

PA -1  This is deducted from A or B marks in the case of premature approximation. The PA -1
penalty is usually discussed at the meeting.

5 (i) State or imply \( dx = 2 \cos \theta \, d\theta \), or \( \frac{dx}{d\theta} = 2 \cos \theta \), or equivalent

B1

Substitute for \( x \) and \( dx \) throughout the integral

M1

Obtain the given answer correctly, having changed limits and shown sufficient working

A1 [3]

(ii) Replace integrand by \( 2 - 2 \cos 2\theta \), or equivalent

B1

Obtain integral \( 2 \theta - \sin 2\theta \), or equivalent

B1

Substitute limits correctly in an integral of the form \( a\theta \pm b \sin 2\theta \), where \( ab \gg 0 \)

M1

Obtain answer \( \frac{1}{3} \pi - \frac{\sqrt{3}}{2} \), or exact equivalent

[The f.t. is on integrands of the form \( a + c \cos 2\theta \), where \( ac \gg 0 \).]

6 (i) State modulus is 2

B1

State argument is \( \frac{1}{6} \pi \), or 30°, or 0.524 radians

B1 [2]

(ii) (a) State answer \( 3\sqrt{3} + i \)

B1

(b) EITHER: Multiply numerator and denominator by \( \sqrt{3} - i \), or equivalent

M1

Simplify denominator to 4 or numerator to \( 2\sqrt{3} + 2i \)

A1

Obtain final answer \( \frac{1}{2} \sqrt{3} + \frac{1}{2} i \), or equivalent

A1

OR 1: Obtain two equations in \( x \) and \( y \) and solve for \( x \) or for \( y \)

M1

Obtain \( x = \frac{1}{2} \sqrt{3} \) or \( y = \frac{1}{2} \)

A1

Obtain final answer \( \frac{1}{2} \sqrt{3} + \frac{1}{2} i \), or equivalent

A1

OR 2: Using the correct processes express \( iz/\bar{z} \) in polar form

M1

Obtain \( x = \frac{1}{2} \sqrt{3} \) or \( y = \frac{1}{2} \)

A1

Obtain final answer \( \frac{1}{2} \sqrt{3} + \frac{1}{2} i \), or equivalent

(iii) Plot \( A \) and \( B \) in relatively correct positions

B1

EITHER: Use fact that angle \( AOB = \arg(iz\ast) - \arg z \)

M1

Obtain the given answer

A1

OR 1: Obtain tan \( A\hat{O}B \) from gradients of \( OA \) and \( OB \) and the correct tan(\( A - B \)) formula

M1

Obtain the given answer

A1

OR 2: Obtain cos \( A\hat{O}B \) by using correct cosine formula or scalar product

M1

Obtain the given answer

A1 [3]
7 (i) State correct equation in any form, e.g. \( \mathbf{r} = \mathbf{i} + 2\mathbf{j} + 2\mathbf{k} + \lambda(2\mathbf{i} - 2\mathbf{j} - 2\mathbf{k}) \)  

(ii) EITHER: Equate a relevant scalar product to zero and form an equation in \( \lambda \)  

OR 1: Equate derivative of \( \mathbf{OP}^2 \) (or \( \mathbf{OP} \)) to zero and form an equation in \( \lambda \)  

OR 2: Use Pythagoras in \( \mathbf{OAP} \) or \( \mathbf{OBP} \) and form an equation in \( \lambda \)  

State a correct equation in any form  

Solve and obtain \( \lambda = -\frac{1}{6} \) or equivalent  

Obtain final answer \( \mathbf{OP} = \frac{2}{3}\mathbf{i} + \frac{5}{3}\mathbf{j} + \frac{7}{3}\mathbf{k} \), or equivalent  

(iii) EITHER: State or imply \( \mathbf{OP} \) is a normal to the required plane  

State normal vector \( 2\mathbf{i} + 5\mathbf{j} + 7\mathbf{k} \), or equivalent  

Substitute coordinates of a relevant point in \( 2x + 5y + 7z = d \) and evaluate \( d \)  

Obtain \( 2x + 5y + 7z = 26 \), or equivalent  

OR 1: Find a vector normal to plane \( \mathbf{AOB} \) and calculate its vector product with a direction vector for the line \( \mathbf{AB} \)  

Obtain answer \( 2\mathbf{i} + 5\mathbf{j} + 7\mathbf{k} \), or equivalent  

Substitute coordinates of a relevant point in \( 2x + 5y + 7z = d \) and evaluate \( d \)  

Obtain \( 2x + 5y + 7z = 26 \), or equivalent  

OR 2: Set up and solve simultaneous equations in \( a, b, c \) derived from zero scalar products of \( a\mathbf{i} + b\mathbf{j} + c\mathbf{k} \) with (i) a direction vector for line \( \mathbf{AB} \), (ii) a normal to plane \( \mathbf{OAB} \)  

Obtain \( a : b : c = 2 : 5 : 7 \), or equivalent  

Substitute coordinates of a relevant point in \( 2x + 5y + 7z = d \) and evaluate \( d \)  

Obtain \( 2x + 5y + 7z = 26 \), or equivalent  

OR 3: With \( Q(x, y, z) \) on plane, use Pythagoras in \( \mathbf{OPQ} \) to form an equation in \( x, y \) and \( z \)  

Form a correct equation  

Reduce to linear form  

Obtain answer \( 2x + 5y + 7z = 26 \), or equivalent  

OR 4: Find a vector normal to plane \( \mathbf{AOB} \) and form a 2-parameter equation with relevant vectors, e.g., \( \mathbf{r} = \mathbf{i} + 2\mathbf{j} + 2\mathbf{k} + \lambda(2\mathbf{i} - 2\mathbf{j} + 2\mathbf{k}) + \mu(8\mathbf{i} - 6\mathbf{j} + 2\mathbf{k}) \)  

State three correct equations in \( x, y, z, \lambda \) and \( \mu \)  

Eliminate \( \lambda \) and \( \mu \)  

Obtain answer \( 2x + 5y + 7z = 26 \), or equivalent  

© UCLES 2010
8 (i) State or imply the form \( \frac{A}{1+x} + \frac{Bx+C}{1+2x^2} \) \( \quad \) B1

Use any relevant method to evaluate a constant \( \quad \) M1
Obtain one of \( A = -1, B = 2, C = 1 \) \( \quad \) A1
Obtain a second value \( \quad \) A1
Obtain the third value \( \quad \) A1 [5]

(ii) Use correct method to obtain the first two terms of the expansion of \((1 + x)^{-1}\) or \( (1 + 2x^2)^{-1} \) \( \quad \) M1
Obtain correct expansion of each partial fraction as far as necessary \( \quad \) A1√ + A1√
Multiply out fully by \( Bx + C \), where \( BC \neq 0 \) \( \quad \) M1
Obtain answer \( 3x - 3x^2 + 3x^3 \) \( \quad \) A1 [5]

[Symbolic binomial coefficients, e.g., \( \binom{1}{1} \) are not sufficient for the first M1. The f.t. is on \( A, B, C. \)]

[If \( B \) or \( C \) omitted from the form of fractions, give B0M1A0A0A0 in (i); M1√A1√ in (ii), max 4/10.]

[If a constant \( D \) is added to the correct form, give M1A1A1A1 and B1 if and only if \( D = 0 \) is stated.]

[If an extra term \( D(1 + 2x^2) \) is added, give B1M1A1A1, and A1 if \( C + D = 1 \) is resolved to \( 1/(1 + 2x^2) \).]

[In the case of an attempt to expand \( 3x(1 + x)^{-1}(1 + 2x^2)^{-1} \), give M1A1A1 for the expansions up to the term in \( x^3 \), M1 for multiplying out fully, and A1 for the final answer.]

[For the identity \( 3x = (1 + x + 2x^2 + 2x^3)(a + bx + cx^2 + dx^3) \) give M1A1; then M1A1 for using a relevant method to find two of \( a = 0, b = 3, c = -3 \) and \( d = -3 \); and then A1 for the final answer in series form.]

9 (i) Use correct product rule \( \quad \) M1
Obtain correct derivative in any form \( \quad \) A1
Equate derivative to zero and find non-zero \( x \) \( \quad \) M1
Obtain \( x = \exp\left(-\frac{1}{3}\right) \), or equivalent \( \quad \) A1
Obtain \( y = -\ln(3e), \) or any ln-free equivalent \( \quad \) A1 [5]

(ii) Integrate and reach \( kx^4 \ln x + \int x^4 \cdot \frac{1}{x} \ dx \) \( \quad \) M1

Obtain \( \frac{1}{2} x^4 \ln x - \frac{1}{4} \int x^3 \, dx \) \( \quad \) A1
Obtain integral \( \frac{1}{2} x^4 \ln x - \frac{1}{16} x^4, \) or equivalent \( \quad \) A1
Use limits \( x = 1 \) and \( x = 2 \) correctly, having integrated twice \( \quad \) M1
Obtain answer \( 4 \ln 2 - \frac{15}{16}, \) or exact equivalent \( \quad \) A1 [5]
10 (i) State or imply \( \frac{dx}{dt} = k(20 - x) \)  
Show that \( k = 0.05 \)  
B1  [2]

(ii) Separate variables correctly and integrate both sides  
Obtain term \(-\ln(20 - x)\), or equivalent  
Obtain term \( \frac{1}{20}t \), or equivalent  
Evaluate a constant or use limits \( t = 0, x = 0 \) in a solution containing terms \( a \ln(20 - x) \) and \( bt \)  
Obtain correct answer in any form, e.g. \( \ln 20 - \ln(20 - x) = \frac{1}{20}t \)  

(iii) Substitute \( t = 10 \) and calculate \( x \)  
Obtain answer \( x = 7.9 \)  
M1(dep*)  A1  [2]

(iv) State that \( x \) approaches 20  
B1  [1]
