Paper 2 Theory

October/November 2012

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Section A

Answer **all** questions.

Write your answers in the spaces provided in the Question Paper.

Section B

Answer any **three** questions.

Write your answers in the spaces provided in the Question Paper.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use	
Section A	
B6	
B7	
B8	
B9	
Total	

This document consists of **17** printed pages and **3** blank pages.

Section A

Answer **all** the questions in this section in the spaces provided.

The total mark for this section is 45.

- A1 (a)** Define the term *compound*.

..... [1]

- (b)** Choose from the following compounds to answer the questions below.

calcium carbonate
carbon dioxide
carbon monoxide
ethane
glucose
methane
propane
sodium oxide
sucrose
water
zinc oxide

Each compound can be used once, more than once or not at all.

Which compound

- (i)** is a product of fermentation,

..... [1]

- (ii)** reacts with both hydrochloric acid and aqueous sodium hydroxide,

..... [1]

- (iii)** reacts with hydrochloric acid to form a gas which turns limewater milky,

..... [1]

- (iv)** is formed by the thermal decomposition of limestone,

..... [1]

- (v)** is a hydrocarbon formed by the bacterial decay of vegetable matter,

..... [1]

- (vi)** is a product of the incomplete combustion of a hydrocarbon?

..... [1]

- (c) Draw a ‘dot-and-cross’ diagram for a molecule of water.
Show only the outer shell electrons.

[2]

[Total: 9]

- A2** A student heated different mixtures of metals and metal oxides.
The table shows his results.

mixture	reacts or no reaction
iron(III) oxide + zinc	reacts
lead(II) oxide + iron	reacts
lead(II) oxide + zinc	reacts
magnesium oxide + zinc	no reaction

- (a) (i) Predict the order of reactivity of the metals iron, lead, magnesium and zinc.

least reactive ← → most reactive

..... [1]

- (ii) Construct the equation for the reaction of iron(III) oxide, Fe_2O_3 , with zinc. The products are zinc oxide, ZnO , and iron.

[1]

- (b) Aluminium is high in the reactivity series but does not appear to react with either water or acids.

- (i) Explain why aluminium appears to be unreactive.

.....

..... [2]

- (ii) Explain why aluminium is used in the manufacture of aircraft.

..... [1]

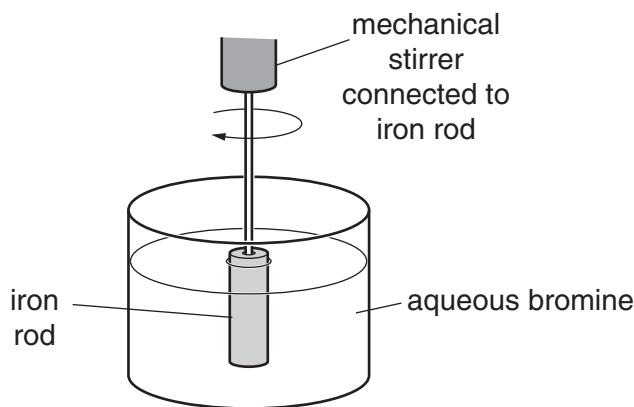

- (iii) Only one naturally-occurring isotope of aluminium is known.
State the number of protons and neutrons in this isotope of aluminium.

number of protons

number of neutrons [1]

[Total: 6]

- A3** The rate of reaction of iron with aqueous bromine is determined using the apparatus shown below.

The iron is removed at regular intervals. It is washed, dried and then weighed. The iron is then replaced in the solution.

The experiment is repeated twice, each time with a different concentration of aqueous bromine.

The results are shown in the table below.

concentration of aqueous bromine mol/dm ³	speed of reaction mg iron reacted/min
0.050	9.2
0.10	18.1
0.15	27.2

- (a) (i)** Describe how and explain why the speed of this reaction changes with the concentration of bromine.

.....
.....
.....

[2]

- (ii)** Describe and explain the effect of temperature on the speed of this reaction.

.....
.....
.....

[2]

- (iii)** Suggest another method of measuring the speed of this reaction.

.....
.....

[1]

(b) The equation for the reaction is

(i) Construct two half-equations for this reaction to show electron loss and gain.

[2]

(ii) Draw a labelled enthalpy profile diagram for the overall reaction.
On your diagram include

- the enthalpy change of reaction,
- the activation energy,
- reactants,
- products.

[3]

[Total: 10]

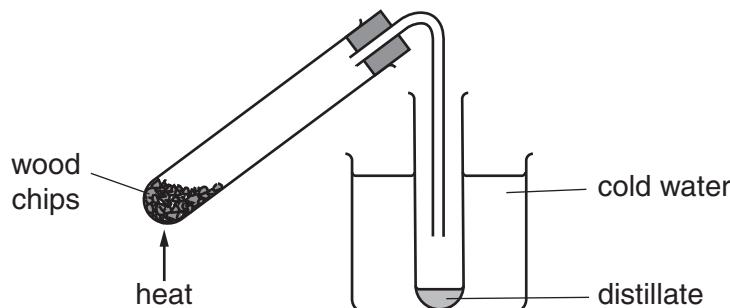

A4 Wood is made up of many different carbon compounds.

- (a) Describe how carbon compounds are made in plants by photosynthesis.

.....

 [3]

- (b) When wood is heated in the absence of air, the carbon compounds in the wood decompose.

The distillate contains a number of organic compounds, including

ethanoic acid

ethanal

ethanol

methanol

- (i) When calcium hydroxide is added to the distillate, it neutralises the ethanoic acid.
 Name the salt formed in this neutralisation.

..... [1]

- (ii) Ethanal can be removed from the distillate by a second distillation.
 On what physical property of ethanal does this distillation depend?

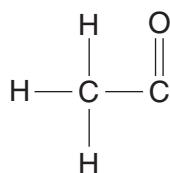

..... [1]

- (iii) The composition by mass of ethanal is C 54.5%, H 9.1%, O 36.4%. Calculate the empirical formula of ethanal.

[2]

- (c) Ethanol reacts with ethanoic acid to form the ester ethyl ethanoate.

- (i) Complete the following formula for ethyl ethanoate.

[1]

- (ii) State a commercial use for esters.

..... [1]

[Total: 9]

- A5 Nickel can be refined by reacting the impure metal with carbon monoxide. The impurities do not react with carbon monoxide.

A volatile compound called nickel carbonyl is formed.

This is decomposed to give pure nickel and carbon monoxide.

- (a) (i) Explain the meaning of the term *volatile*.

..... [1]

- (ii) Suggest how nickel carbonyl might be decomposed.

..... [1]

- (iii) Explain how this method separates nickel from its impurities.

..... [1]

- (b) Nickel carbonyl has the formula $\text{Ni}(\text{CO})_x$.

The relative molecular mass of nickel carbonyl is 171.

Calculate the value of x.

value of x = [1]

- (c) Nickel is refined by electrolysis in a similar way to copper.

Draw a labelled diagram of the apparatus you would use to purify nickel by electrolysis in the laboratory.

[4]

- (d) Nickel is a metal.

State three physical properties shown by **all** metals.

.....

.....

..... [3]

[Total: 11]

[Turn over

Section B

Answer **three** questions from this section in the spaces provided.

The total mark for this section is 30.

B6 Seawater contains chloride, bromide and iodide ions.

Bromine can be manufactured by bubbling chlorine through seawater.

- (a) (i) Explain why the reaction of chlorine with bromide ions involves both oxidation and reduction.

.....
.....

[2]

- (ii) Describe how you could determine the pH of the resulting solution.

.....
.....

[1]

- (iii) Explain why iodine will not displace bromine from seawater.

.....

[1]

- (b) Bromine reacts with many elements to form bromides.

The table shows the boiling points and electrical conductivity for the bromides **A**, **B**, **C** and **D**.

bromide	boiling point / °C	electrical conductivity when molten
A	1435	conducts
B	916	conducts
C	154	does not conduct
D	173	does not conduct

Which two bromides are bonded covalently? Give a reason for your answer.

.....

[1]

- (c) Chlorine reacts with cold dilute sodium hydroxide to form sodium chlorate(I), NaClO, sodium chloride and water.

Construct an equation for this reaction.

[1]

- (d) The concentration of sodium chlorate(I) in a solution can be found by reacting sodium chlorate(I) with excess acidified potassium iodide and then titrating the iodine liberated with aqueous sodium thiosulfate, $\text{Na}_2\text{S}_2\text{O}_3$.

A solution of sodium thiosulfate contains 12.4 g of sodium thiosulfate, $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$, in 1.00 dm³ of solution.

- (i) Calculate the concentration of the sodium thiosulfate solution in mol/dm³.

$$\text{concentration} = \dots \text{mol/dm}^3 [1]$$

- (ii) 23.6 cm³ of this sodium thiosulfate solution reacts with exactly 12.5 cm³ of aqueous iodine.

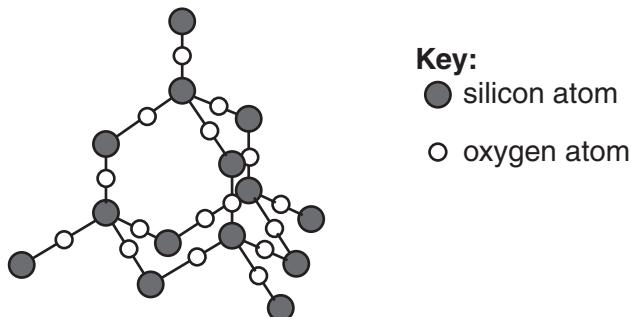

Calculate the concentration, in mol/dm³, of the aqueous iodine.

[3]

[Total: 10]

B7 Glass contains silicon(IV) oxide and a number of metal oxides.

- (a) The structure of silicon(IV) oxide is shown below.

- (i) Describe **two** similarities in the structure of silicon(IV) oxide and diamond.

.....
.....
.....

[2]

- (ii) Explain why silicon(IV) oxide has a high melting point.

.....

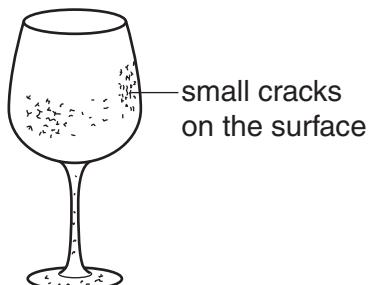

[2]

- (iii) Explain why silicon(IV) oxide does not conduct electricity.

.....

[1]

- (b) Old wine glasses often appear cloudy because they have many small cracks on their surface.

The cracks are caused by differences in the rate of diffusion of sodium ions and hydrogen ions in the glass.

- (i) Explain the meaning of the term *diffusion*.

.....

[1]

- (ii) Suggest why sodium and hydrogen ions do not diffuse at the same rate.

.....

[1]

- (c) Sodium oxide is an ionic compound.
Draw a 'dot-and-cross' diagram to show

- the arrangement of the outer shell electrons,
- the charges on the ions and
- the formula of sodium oxide.

For
Examiner's
Use

[3]

[Total: 10]

B8 Many fertilisers contain phosphate ions and nitrate ions.

- (a) Explain why farmers put fertilisers on the soil.

..... [1]

- (b) Why should the chemicals in fertilisers be soluble in water?

..... [1]

- (c) Ammonium nitrate, NH_4NO_3 , and ammonium sulfate, $(\text{NH}_4)_2\text{SO}_4$, are commonly used in fertilisers.

- (i) Calculate the percentage of nitrogen by mass in ammonium nitrate.

..... [3]

- (ii) Describe how crystals of ammonium sulfate can be prepared from aqueous ammonia.

.....
.....
.....
.....

..... [4]

- (d) The formula of calcium phosphate is $\text{Ca}_3(\text{PO}_4)_2$.
Use this formula to deduce the charge on the phosphate ion.

..... [1]

[Total: 10]

B9 Chlorine and sodium hydroxide are manufactured by the electrolysis of concentrated aqueous sodium chloride.

(a) (i) Chlorine can be used to bleach wood pulp.

Name another chemical that can be used to bleach wood pulp.

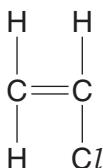

..... [1]

(ii) Explain the purpose of chlorine in water purification.

..... [1]

(b) Chlorine is used to make chloroethene.

The structure of chloroethene is shown below.

(i) Draw the structure of the polymer poly(chloroethene).

[2]

(ii) Chloroethene is an unsaturated compound.

Describe a positive test for an unsaturated compound.

test

result [2]

(c) Sodium hydroxide is a typical alkali.

It reacts with ethanoic acid to form water and the ionic salt, sodium ethanoate.

(i) Write the formula for the ethanoate ion showing all atoms and bonds.

[1]

(ii) Construct the ionic equation for the reaction of ethanoic acid with sodium hydroxide.

[1]

(d) Compounds containing hydroxide ions can be added to the soil to reduce its acidity.

(i) Explain why adding hydroxide ions to the soil can cause the loss of nitrogen from fertilisers containing ammonium salts.

..... [1]

(ii) Construct an ionic equation for this reaction.

[1]
