MARK SCHEME for the May/June 2010 question paper
for the guidance of teachers

6065 FOOD AND NUTRITION

6065/01 Paper 1 (Written), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.
Section A

1 (a) (i) Monosaccharides
simple sugars – C₆H₁₂O₆ – basic unit – end product of digestion –
sweet – soluble in water
(4 points) (2 points = 1 mark) [2]

(ii) Disaccharides
double sugars – C₁₂H₂₂O₁₁ – 2 monosaccharides combined –
sweet – soluble in water – glucose + 1 other simple sugar –
broken down to monosaccharides during digestion
(4 points) (2 points = 1 mark) [2]

(iii) Polysaccharides
made up of many monosaccharides – insoluble in water – not sweet –
not all polysaccharides can be digested –
Non Starch Polysaccharide (NSP) – adds bulk to diet –
prevents constipation/diverticulitis/varicose veins etc.–
chain is branched – cannot break –
starch can be digested – because molecules are linked together in a simple chain
(4 points) (2 points = 1 mark) [2]

(iv) Digestion and absorption
in the mouth
amylase/ptyalin – from salivary glands – acts on cooked starch –
converting it into maltose
in the duodenum
amylase – in pancreatic juice – converts starch to maltose
in the ileum
maltase – in intestinal juice – converts maltose to glucose –
villi – finger-like projections – in walls of small intestine –
have walls made of single cells – and a network of blood capillaries –
glucose passes through walls of blood vessels – into bloodstream –
then transported to liver
(12 points) (2 points = 1 mark) [6]

(v) Reasons for reducing sugar intake
tooth decay – bacteria change sugar to acids – dissolve enamel excess stored as fat – obesity – breathless – low self-esteem –
associated with coronary heart disease (CHD) – varicose veins – hypertension etc. risk of diabetes – too much glucose in blood for insulin produced
3 reasons + 3 explanations
(6 points) (2 points = 1 mark) [3]

(vi) Ways of reducing sugar
avoid adding sugar to drinks – use artificial sweetener –
fewer sweets/chocolate – biscuits/cakes – reduce sugar in recipes –
use canned fruit in fruit juice instead of syrup –
drink low calorie drinks/Diet Coke – avoid fizzy drinks –
do not buy sugar-coated breakfast cereal – buy ‘sugar free’ products –
fewer convenience foods – study nutritional information on packaging
(6 points) (2 points = 1 mark) [3]

© UCLES 2010
(b) (i) **Importance of iron**
formation of haemoglobin – red pigment in blood –
picks up oxygen from lungs – oxyhaemoglobin –
transports oxygen to cells – oxidises glucose – cell respiration –
energy produced – leaving carbon dioxide and water –
CO₂ attaches to haemoglobin – carboxyhaemoglobin –
transported to lungs – for breathing out/disposal
(4 points) (2 points = 1 mark) [2]

(ii) **Sources of iron**
liver/kidney – red meat (or one named e.g. corned beef) –
eggs – cocoa/plain chocolate – curry powder – black treacle –
dried fruit (or named e.g.) – pulses (or named e.g.) – soya beans –
green vegetables (or one named e.g.)
(4 points) (2 points = 1 mark) [2]

(iii) **Deficiency disease**
Anaemia
(1 mark) [1]

(iv) **Symptoms**
pale – tired/lethargic/fatigued – weak – headaches –
feel dizzy/faint – lacks energy – breathless –
(2 points = 1 mark) [1]

(c) (i) **Importance of vitamin C**
clear skin – building/maintenance of linings of digestive system –
makes connective tissue – to bind cells together –
for production of blood – and walls of blood vessels – immunity –
growth – helps to heal wounds/fractures –
helps to build strong teeth and gums –
absorption of iron – antioxidant etc.
(4 points) (2 points = 1 mark) [2]

(ii) **Sources of vitamin C**
citrus fruit (or named e.g.) – blackcurrants – rose hips –
strawberries – melon – tomatoes – mango – green peppers –
green vegetables (or named e.g.) – new potatoes etc.
(4 points) (2 points = 1 mark) [2]

(iii) **Deficiency disease**
Scurvy
(1 mark) [1]

(iv) **Symptoms**
walls of blood vessels weaken/break – blood escapes –
bruises appear under the skin – pain in muscles and joints –
gums bleed – teeth loosen – heart failure –
as blood passes through walls of capillaries etc.
(2 points = 1 mark) [1]
(d) **Deficiency diseases**

- Not iron or vitamin C – in previous questions
  - Vitamin A/Retinol: Night blindness/Xerophthalmia
  - Vitamin D/Cholecalciferol: Rickets/osteomalacia
  - Vitamin B1/Thiamine: Beri–beri
  - Vitamin B2/Riboflavin: Dermatitis/cataracts
  - Vitamin B3/Nicotinic acid: Pellagra
  - Vitamin B12/cobalamin: Pernicious anaemia
  - Folate/folic acid: Anaemia/spina bifida
  - Calcium: Rickets/osteomalacia/osteoporsis/tetany
  - Iodine: Goitre
  - Protein: Kwashiorkor
  - Carbohydrate/fat/protein: Marasmus (lack of energy foods)

4 deficiency diseases × 1 point
4 associated nutrients × 1 point

(8 points) (2 points = 1 mark) [4]

(e) **Planning meals for the elderly**

- Small portions – appetite reduces with age
- Remove bones/skin etc. – eyesight may be poorer – food needs to be easy to eat/chew – may need to cut into small pieces/mince – elderly may have few teeth
- Fewer carbohydrate foods – elderly may be less active
- Need protein foods – to repair worn out cells
- Iron – to prevent anaemia
- Vitamin C – to absorb iron – immunity
- Calcium/phosphorus – to maintain bones and teeth – for blood clotting – muscle function
- Vitamin D – to absorb calcium
- Soft foods – easier to eat
- Low in fat – easier to digest – reduces risk of CHD – obesity
- Reduce salt – reduces risk of hypertension/high blood pressure
- Reduce sugar – reduces risk of tooth decay and obesity – high sugar intake is linked to diabetes
- Fruit and vegetables – NSP – less risk of constipation
- Variety of colour – flavour – texture – to add interest – make appetising
- Reduce spices and strong flavours – these are less easily tolerated
- Snack foods should be nutritious – include milk daily etc.

(12 points) (2 points = 1 mark) [6]

[Section A Total: 40]
Section B

2 (a) Nutrients in eggs
protein (or named e.g. ovalbumin/mucin/vitellin) – fat –
vitamin A/retinol – vitamin D/cholecalciferol –
vitamin B2/riboflavin (or vitamin B) – iron – phosphorus – sulfur
(6 points) (2 points = 1 mark) [3]

(b) Uses of eggs
main dish/breakfast/snack – omelette, scrambled egg, boiled egg etc.
trapping air/making mixtures rise – Swiss roll, sponge flan etc.
lightening – mousse, meringue, soufflé
thickening – custard, sauces, soup etc.
setting – quiche, rich cakes, baked egg custard etc.
emulsifying – mayonnaise, rich cakes etc.
binding – croquettes, fish cakes, stuffing etc.
coating – Scotch eggs, fish fillets etc.
glazing – pastry, bread etc.
enriching – sauces, milk pudding, soup etc.
garnishing – salad, dressed crab, omelette strips etc.
colour – pastry, cake etc.
5 uses + 5 examples
(10 points) (2 points = 1 mark) [5]

(c) Storage of eggs
cool place/refrigerator – keep longer –
not too dry – water evaporates –
in an egg box/special rack in fridge door – safe/less easily broken –
do not store past expiry date – not safe to eat – risk of Salmonella –
do not freeze whole eggs – liquid inside shell expands and cracks shell
freeze only if separated – add sugar or salt to egg whites –
do not wash shells – removes protective cuticle – bacteria enter –
round end upwards – air space at top – holds yolk in place –
check for cracked eggs – bacteria enter – egg contaminated –
use in rotation – prevents waste –
keep away from strong smells/onions/fish – smell absorbed through pores in shell – etc.
(6 points) (2 points = 1 mark) [3]

(d) Changes when egg is boiled
protein coagulates/sets/solidifies/harden –
egg white at 60°C – egg yolk at 66°C –
egg white thickens – changes from transparent to opaque –
becomes firm – then rubbery if overcooked –
yolk thickens – becomes powdery when overheated –
green ring forms around yolk – ferrous sulfate –
iron in yolk – sulfur in egg white –
indigestible if overcooked
(8 points) (2 points = 1 mark) [4]
3 (a) **Food additives**
nutritional – vitamin C in fruit juice, calcium in white flour, vitamins A and D in margarine
improve keeping quality/preserve/reduce spoilage – used in processed foods –
make food more attractive/add colour – flavour – smell –
can improve texture/consistency – stabilisers –
emulsify fat and water – prevent separating – ice cream, mayonnaise
anti-oxidant – prevent rancidity in fats
can be natural but not found in particular food added to
or synthetic – e.g. vitamin C can be made synthetically –
can be artificial colours and flavours etc.
E numbers have been approved by the European Community –
must be used in smallest amount possible to produce desired effect –
some people are allergic/intolerant to certain additives
long–term effect is not known – used in processed foods
must be stated, by law, if contained in the product
danger of adding nut extracts for those allergic to nuts etc.
may be used to increase sales – longer shelf-life – reduce waste etc.
(10 points) (2 points = 1 mark)

(b) **Uses of fats and oils**
spreading on bread – butter, margarine
frying – corn oil, sunflower seed oil, dripping
sauce-making – margarine, butter
aeration – margarine traps air when creamed with sugar in cakes
pastry-making – holds layers apart in flaky pastry – cake-making –
shortening – crumbly texture of shortcrust pastry, rock buns etc.
adding flavour – butter in cake-making
improve keeping quality – butter used in rich cakes etc.
sealing – melted butter/margarine on pate to retain moisture – flavour/colour
adds calories without adding bulk – fried food
dressings – French dressing
form an emulsion – mayonnaise
basting – adds moisture to meat cooked by dry heat/grilled/roasted
decorating – butter icing
make foods easier to eat/lubricates – butter on toast
prevent sticking – oiled baking tins
retains moisture – rich cakes
glazes – melted butter on new potatoes, carrots etc.
(10 points) (2 points = 1 mark)

(c) **Reasons for choosing a vegetarian diet**
religious beliefs
object to slaughter of animals – think it cruel – family custom
expensive to rear animals – land could be used for crops –
more people could be fed from same area of land
dislike of animal flesh – texture/taste etc.
meat is expensive to buy
belief that vegetarian diet is more healthy –
animal fat has cholesterol – associated with CHD
recent health scares – BSE/bird ‘flu etc./salmonella
(10 points) (2 points = 1 mark)
4 (a) Reasons for preserving food
- enjoy food out of season
- buy food when plentiful to use when scarce
- to cope with a glut
- to prevent waste
- to give variety – food can be frozen, dried
- new products made – jam, pickles etc.
- to enjoy foods produced in other countries
- to have a store of food
- useful in emergencies etc.
- to prevent the growth of yeast – mould – bacteria
- to prevent loss of water/dehydration of fresh foods

(b) Methods of preserving

Freezing
- water in cells frozen – unavailable for growth of bacteria –
  bacteria cannot grow at low temperatures – dormant –
  e.g. fish, vegetables , meat etc.

Jam–making
- high sugar content/60% added sugar –
  water withdrawn from cells – too concentrated for bacteria to thrive
  sealed in jars – to prevent entry of micro-organisms
  e.g. plums, strawberries, guava etc.

Pickling
- salt to cover food – withdraw water from cells (by osmosis)
  acid/vinegar to replace water – micro-organisms cannot thrive in high acidic conditions
  e.g. onions, gherkins, cabbage etc.

Pasteurisation
- heated to 72°C (162°F) – 15 seconds or 63°C (145°F) – 30 minutes
  cooled rapidly – destroys harmful bacteria
  e.g. milk, fruit juice etc.

Ultra Heat Treatment (UHT)
- heated to 132°C – for not more than 1 second –
  destroys harmful bacteria – prevents souring
  e.g. milk, cream etc

Bottling and Canning
- heat destroys bacteria – sealed to prevent further entry of bacteria
  e.g. fruit, milk, vegetables, fish etc.

Drying
- water removed – bacteria cannot multiply without water
  e.g. fruit, meat, fish, herbs, spices etc.

Salting
- water removed by osmosis – micro–organisms need water to thrive
  e.g. fish, beans etc.
Smoking
salt removes water – phenols from smoke deposited on food surface
inhibits growth of micro-organisms
e.g. fish, meat

Accelerated Freeze Drying (AFD)
water sublimes in vacuum – structure remains same –
micro-organisms need water to thrive e.g. coffee, vegetables, strawberries

Vacuum packing
air removed – entry of micro-organisms prevented –
no oxygen for bacterial growth
e.g. meat, fish, coffee etc.

Irradiation
packages irradiated – no change to appearance of food –
cannot detect that process has taken place –
micro-organisms destroyed by gamma rays –
e.g. spices, strawberries etc.

Artificial additives
sulfur dioxide – nitrates – inhibit growth of micro-organisms
e.g. sausages, bacon etc.

Name of method 1 point
Principles of method 2 points
Named example 1 point
4 points for each method
3 methods of preserving 3 x 4 points = 12 points
2 points = 1 mark
(c) (i) Advantages and disadvantages of convenience foods

**Advantages**
- save time
- little or no preparation
- little or no cooking
- useful in emergencies
- less washing up
- no waste
- large variety available
- readily available
- easy to carry
- portion control
- cook may not have ability to make product – e.g. puff pastry
- less equipment required
- may cook and serve in same container
- consistent product
- easy to store
- longer shelf life than fresh
- may be fortified/have added nutrients

**Disadvantages**
- expensive
- packaging may cause pollution
- can be high in fat
- can be high in sugar
- can be high in salt
- can be low in NSP
- contain additives
- small portions
- loss of vitamins B and C during processing
- loss of skills
- 6 points – at least 2 points from each area
- 2 points = 1 mark [3]
(ii) **Labelling convenience foods**

- give information to consumer – some information is a legal requirement
- name of product – so consumer knows what is being bought
- description – further details e.g. tuna in brine/identify
- brand – reliability, consumer knows what to expect etc.
- name of manufacturer – recognised as something seen before
- address of manufacturer – in case of need to contact
- ingredients – descending order – by weight – consumer may have allergies etc.
- cooking instructions – for best result/new product/inexperienced
- storage instruction – to maintain best condition
- serving suggestion – to give ideas to consumer
- picture of product – to give information on new products
- weight – consumer can calculate unit cost/make comparisons
- special claims – reduced fat/no added sugar/added vitamin C etc.
- vegetarian society symbol – so vegetarians know food is suitable
- wheat ear symbol – gluten free/coeliacs can consume
- recycle symbol – consumer knows how to dispose
- nutritional information – consumer knows nutritional value per 100g
- kilocalorie content – consumer may be calorie counting, trying to lose weight
- sugar – useful for diabetics
- fat – states amount of saturated fat –
- – consumer may have CHD – or wish to follow healthier diet
- salt – consumer can control salt intake if suffering from hypertension
- additives identified – consumer may wish to avoid/allergies etc.
- may include nuts – important information for people with allergies etc.
- price – if on special offer/can compare with other products etc.

(8 points) (2 points = 1 mark) [4]

5 (a) **Reasons for the importance of cereals**

- readily available – easy to transport – easy to grow – cheap –
- carbohydrate/starch – source of energy – staple food – filling – easy to store – source of (LBV) protein – NSP in wholegrains –
- versatile – can be used for sweet and savoury dishes –
- easy to prepare – easy to eat etc.

(6 points) (2 points = 1 mark) [3]

(b) **Named cereals**

- millet – rice – sorghum

(4 points) (2 points = 1 mark) [2]
(c) **Storage of cereals**
cool – dry – to prevent germination/growth – away from smells –
to prevent mould – and formation of lumps –
check regularly – can be attacked by weevils –
covered containers – to prevent entry of dust etc. –
sealed – to keep out moisture etc. –
keep bins off the ground – prevent attack by rats etc. –
use in rotation – do not mix old and new supplies –
decay could spread from old to new – wasteful –
wholegrain cereals do not keep as long – fat becomes rancid etc.

(6 points) (2 points = 1 mark) 

(d) **Choice of flour for making bread**
strong/hard flour – high gluten content – becomes stretchy/elastic with moisture – and kneading – stretches to hold gases –
gives firm structure –
white flour – lighter – so rises better –
plain flour – no chemical raising agent required –
wholemeal flour – contains NSP – follows dietary guidelines –
not SR flour – contains baking powder – yeast is raising agent

(6 points) (2 points = 1 mark) 

(e) **Changes taking place when a loaf of bread is baked**
rises/increases in size –
warmth of oven encourages fermentation of yeast –
carbon dioxide produced – gives open texture –
alcohol evaporates – water evaporates – pushes up dough –
yeast is killed by heat – no more carbon dioxide produced –
gas in dough expands when heated – protein/gluten coagulates –
shape sets – starch dextrinises – forms crust – browns –
crust lifts off/‘oven spring’ – light texture – fat melts
as carbon dioxide continues to expand after shape has set –
air replaces escaped gas – flour gelatinises –
Maillard browning – action of protein and sugar – etc.

(8 points) (2 points = 1 mark) 

6 (a) **Creaming**
e.g. Victoria sandwich cake, queen cakes, Eve’s pudding etc.
equal quantities – fat and sugar – with wooden spoon/electric mixer –
until light and fluffy – traps air – to help raise the mixture –
butter or soft margarine – good colour – and flavour –
caster sugar – finer grains – easier to cream
(6 points to include 1 example) (2 points = 1 mark) 

(b) **Basting**
e.g. roast beef, grilled steak etc.
pour – or spoon – hot fat – over surface of food – from time to time
to prevent drying – or burning – adds flavour of fat –
and extractives
(6 points to include 1 example) (2 points = 1 mark) 

© UCLES 2010
(c) **Making a roux**

e.g. base for sauce, soup or named e.g. – cheese sauce

equal quantities – fat and flour – usually margarine/butter/dripping

for colour – and flavour – melt fat – do not brown – stir in flour – wooden spoon

resembles a paste – cook over gentle heat – for 1 minute –

stir constantly – to prevent sticking/burning – starch absorbs fat –

looks ‘sandy’/like marzipan (or other description)

(6 points to include 1 example) (2 points = 1 mark) [3]

(d) **Sautéing**

e.g. mushrooms, potatoes, onions

toss – small/thin pieces of food – or cooked food –
in small amount – of hot fat – over low heat – type of frying – lid on pan – until fat absorbed –

quick method – browns food

(6 points to include 1 example) (2 points = 1 mark) [3]

(e) **Making a stock**

e.g. vegetable, chicken, beef, fish

boil – bones/small pieces of food – for a long time – strain

to gain flavour/extractives – to add to soup/sauces/casseroles –

instead of water – can use commercial stock cube

(6 points to include 1 example) (2 points = 1 mark) [3]

7 (a) **Choice and care of kitchen knives**

**Choice**

reliable brand – may have a guarantee –

variety of sizes for different purposes – peeling, chopping etc. –

serrated edge useful for slicing fruit and vegetables finely –

strong handle – comfortable to hold – handle firmly fixed –

wood, plastic etc. – easy to grip – no cracks/joins for dirt to collect

some have blade and handle as one piece of metal – easy to clean –

sharp – blunt knives slip – rigid blade – does not bend when cutting, except palette knives –

need to be flexible –

stainless steel – hard wearing –

large knives not usually stainless unless permanently sharp –

blade able to be sharpened – for efficient cutting etc.

**Care**

store with blades pointing downwards – in a knife block –

or with sheath over blade – or point protected by cork –

use on a chopping board –

wash in hot soapy water – dry thoroughly – to prevent rusting –

do not use to cut frozen meat etc. unless specially for purpose –

wash immediately after cutting lemon – to prevent staining metal –

(10 points to cover choice and care) (2 points = 1 mark) [5]
(b) The disposal of kitchen waste
empty bin daily – wash daily – dry thoroughly – dry in sun –
do not leave water in bin – attracts mosquitoes –
line with plastic bin liner – easier to empty – keeps bin cleaner –
disinfect regularly –
wrap all waste – tie bags – pour away liquid – wrap broken glass –
clear up spills and mess around bin – prevent flies/insects –
cover bin tightly – prevent flies etc. – rinse and flatten cans –
removes smell of food – takes up less space –
recycle paper, glass, aluminium cans etc. If possible –
stand bin outside on bricks – allows air to circulate underneath –
keep outside bin away from house – and from open windows –
so flies do not get into house easily –
do not pour fat down drains – blocks drains when fat hardens –
make sure U-bend contains clean water – disinfect at night –
leave no scraps lying about on work surfaces or floor –
encourages vermin –
do not allow bin to overflow – encourages animals/vermin/insects – etc.
(10 points to cover choice and care) (2 points = 1 mark) 

(c) Hygiene in shops and markets
shop assistants should have clean overalls/aprons –
bacteria from clothing can be transferred to food –
hair tied back from face/covered – prevent hair in food –
clean short fingernails – bacteria thrive in dirt under nails –
no nail varnish – chips and contaminates food –
do not lick fingers when picking up wrapping paper –
bacteria in mouth passes to paper then food –
do not blow into paper bags to open them –
different knives and chopping boards for raw and cooked food –
to prevent cross-contamination – should be hand-washing facilities in shop –
do not handle food and money – dirt on money passes to food –
sell food in rotation – check dates on packages –
refrigerators and freezers should display temperature –
if not cold enough bacteria will not be inactive in freezer –
food will spoil more quickly in refrigerator if not cold enough –
keep premises free from vermin/flies – they carry bacteria –
which pass to food – no rubbish lying around shops or stalls –
smells when rotting – food in freezers should be wrapped well –
food should not be stored above safety line in freezers –
do not sell out-of-date food – number of bacteria will be high –
risk of food poisoning etc.
(10 points to cover choice and care) (2 points = 1 mark) 

[Section B Total: 60]
